Full-Stack Development

Problem Solving

Problem Solving

Youssef Jameel Abdullatif Ali

Software Engineer | Problem Solver | Seeking Opportunities in Backend Development (Python, Django) | Full-Stack Developer
Cairo, Egypt

Summary

I'm a Software Engineering student at Cairo University with a strong passion for solving problems and building high-quality digital solutions.

My main interests are Flutter Development, Back-End Development, and Full Stack Application Development. I'm driven by the challenge of turning ideas into real-world, professional applications that offer both performance and great user experience.

I have a strong ability to analyze and break down problems, which helps me turn any idea into a tangible, functional product. Before writing code, I take time to understand the problem deeply and design a clean, scalable solution — focusing on quality, performance, and efficiency.

I'm also learning and applying Software Design Patterns to build systems that are maintainable, reusable, and architecturally sound. I believe in the power of writing clean, well-structured code that follows best practices in software design.

Beyond coding, I strive to approach every task with professionalism, clear thinking, and effective communication — ensuring that not only the product but also the process is handled with excellence.

I'm currently working on projects related to my specialization while actively learning and improving in areas like back-end architecture, application development, and advanced problem solving. I dedicate time every day to growing technically and creatively as a developer.

Tech Skills:

Frontend: HTML, CSS, JavaScript, React, Bootstrap

Backend & General: Java, Python, C++, Git & GitHub

Mobile Development: Flutter (Dart)

- Passionate about: Problem Solving | Clean Code | Software Design Patterns | Back-End Logic | UI/UX | Software Architecture

- Currently Learning: Back-End Development | App Development | Flutter | Advanced Problem Solving | Design Patterns

- I'm currently open to Internships, Freelance Projects, and Full/Part-Time Opportunities where I can grow, contribute, and collaborate with like-minded professionals.

- I'm endlessly passionate about what I do — and always strive to deliver work that's professional, clean, and impactful.

Experience

Self-Employed

Software Engineering Intern / Freelance Developer / Student Developer
October 2022 - Present (2 years 10 months)

Developing full-stack applications using Flutter, JavaScript (React), and backend technologies.

Applying software engineering principles and design patterns to build scalable and maintainable code.

Continuously learning and improving skills in back-end development, mobile app development, and problem-solving.

Collaborating on personal and academic projects to deliver high-quality, professional solutions.

Using Git and GitHub for version control and project management.

Education

Cairo University (جامعة القاهرة)

Bachelor's degree, Computer Software Engineering · (October 2022 - October 2027)
